

## iPhone Photography Class 4 Summary

We had a very good turnout on Monday, May 16, and thank you for continuing to wear your masks in the small room.

We covered the ways Apple organizes your photos for you, without you doing a thing. You can find your photos by Year, Month, Day and All Photos. You can also find them by file type: Video, portraits, selfies, screen shots, etc. You can even find them by the location where they were taken. You can even do a search for over 100 categories of pictures that Photos recognizes, like flowers, cats, dogs, mountains, lakes, etc.

We also covered how to select your own photos and create an Album with that collection of photos. This is something you should do for each important occasion.

Here is the link to the **Class 4 YouTube video**.

Below are some tutorials I found on the topic of organizing your photos. You might find them useful.

See you Monday for our final class. Bring your questions  
Grace
